

Help with commands:

Command	Example	Description
man <command>	man nano	Describes what the command does, and all the options
<command> --help	nano --help	Describes all of a command's options
apropos <keyword>	apropos directory	Lists of all commands that include the keyword in the description.
history	history	Brings up a list of all previous commands used.

Navigate Directories:

Command	Example	Description
cd <directory>	cd /tmp/names	Changes the current directory. 'cd ../' to go up one directory.
pwd	pwd	Shows the current directory path.
ls <directory>	ls /tmp/names	Lists the contents of a directory.
mkdir <directory>	mkdir pythonFiles	Creates a new, empty directory.

Navigate Files:

Command	Example	Description
touch <file name>	touch program.py	Creates an empty file.
cat <file>	cat program.py	prints the contents of a file to the screen.
nano <file>	nano program.py	Edit a file
vi <file>	vi program.py	Edit a file
mv file <name or location>	mv program.py ../pythonFiles	Moves file to a location, or renames the file.
cp <file1> <file2>	cp program.py backup.py	Copies file1 to file2
chmod <###> <file>	chmod 751 program.py	Changes the permissions of a file.
rm <file>	rm program.py	Removes a file. Use rm -r to remove a directory.
grep <keyword> <file>	grep 'print' program.py	Prints the lines of a file that contain the keyword.

less <file>	less program.py	Outputs the contents of a file.
locate <file>	locate program.py	Finds all locations of a file.
echo 'text'	echo 'Hello World!'	Prints a message to the screen.

Network:

Command	Example	Description
ifconfig	ifconfig	View network information.
ping <ip>	ping 192.168.1.20	Sends packets to the IP to tell you if it is up
nmap <options> <ip>	nmap -sP 192.168.1.0/24	Can be used to check for open ports or online hosts.
ssh user@host	ssh john@192.168.1.20	Connects to the specified host.
ftp user@host	ftp john@192.168.1.20	Transfer files to/from the specified host.
scp user1@host1:<path> h> user2@host2	scp mike@192.168.1.19:/tmp/file john@192.168.1.20	Securely copies a file from one user to another user.

Users:

Command	Example	Description
su <user>	su john	Switches to a specific user. Use 'su -' to switch to root.
chown user:group <file>	chown john:admin program.py	Changes the ownership of a file.
groupadd <group>	groupadd admin	Creates a group.
passwd <user>	passwd john	Modifies a user's password.
useradd <user>	useradd mike	Creates a user.
sudo <command>	sudo rm file	Runs a command with escalated privileges.

The '|' character allows commands to be chained.

Use '>' to overwrite a file. Ex: cmd > file

Use '>>' to add text to the end of a file. Ex: cmd >> file
